

GARRISON FOREST SCHOOL

Lower School Summer Math

2019

For summer math, we are asking students to enjoy Bedtime Math, which is a daily series of fun math stories and problem solving questions. Each day, the reader is given a story and then a range of differentiated questions. [Here](#) is some more information about the benefits of Bedtime Math. You may purchase the three books online (<http://bedtimemath.org/books/>) or download the free app and receive the math problems on your phone. Before your daughter comes back to school, she should write her own Bedtime Math story and questions to share with her class.

We are also encouraging current students to practice their math problem solving skills by using DreamBox. DreamBox is an online software provider that focuses on improving math problem solving and critical thinking skills and developing number sense. Students will login in by clicking their previous grade level. Upcoming Kindergarten students will not have access to DreamBox until the fall. [Click here for information on how to login to DreamBox.](#) If you still have trouble, you can call DreamBox support at 877-451-7845 extension 3. IXL is also an option for current students to work on specific math skills.

We hope you have a fun, math-filled summer!
